

MyChoiceSM Mobile App

The Power for Employees to Access Their Benefits When and Where They Need Them

We've all been there. You're running late to your doctor's appointment (again...), you rush up to the desk hoping to breeze in, when they ask for proof of insurance. Blank stare, palm to forehead. No idea where you put them right?

The MyChoiceSM Mobile App changes all of that! Check benefits details to confirm coverage for that unexpected surgery, whip out ID card information, or add a spouse after walking down the aisle. With the app, your employees now have access to all of their important benefits information – including those pesky ID cards – on their phone, while on-the-go.

For Administrators:

- Reduce calls and questions by providing employees with easy access to all of their important benefits information
- Help eliminate the need to recover SelfEnroll passwords thanks to Single-Sign-On integration
- Accelerate the information gathering process as employees can quickly upload their necessary documents within the App

For Employees:

- View a detailed account of current- and future - medical, dental and vision plans; spending accounts; and voluntary and supplementary benefits
- View all listed primary and contingent beneficiaries for applicable insurance policies
- Stay on top of important deadlines, and send and receive important documentation in regards to benefits, such as dependent verification and EOI
- Upload and store images of ID cards for use on the go
- Contact PPI Client Services for help with enrollment or complex claims issues
